CODE AUDITING

We will audit and release code of programs based on the algorithms developed by COINsolidation, the code audit will be performed by COINsolidation before the release of each version, the code audits will be performed on the codes of the mobile applications developed by COINsolidation, because we do not create any blockchain or "Fork" but the COINsolidation token is created to be used in the Ethereum blockchain we will only audit our developments (Android applications) based on the following algorithms or additional projects that we will be releasing.

Released code from the following algorithms:

CUA - Consolidated Universal Address

DAC - Dual Address Consolidated

HAC . - Hybrid Address Consolidated.

The oneCkey (one Consolidated private Key) algorithm code will be audited and reported annually at the end of each year. No code will be released for security reasons. Only code auditing will be performed.

To review code see link: www.coinsolidation.org
